CAMPUS COMPANION

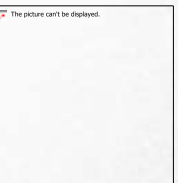

AN AI-DRIVEN
ENROLLMENT AND
LEARNING MANAGEMENT
SYSTEM

Maranatha Christian Academy, Calapan City
www.mcaportal.online

Education has always been viewed as the key to a brighter future. In the Philippines, the implementation of the K-12 curriculum under RA 10533 aimed to better prepare students for real-world challenges by enhancing their knowledge, skills, and values.

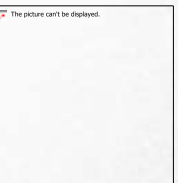

Despite these improvements, many schools still rely on traditional systems—manual enrollment, paper-based attendance, and limited feedback collection. These methods are not only time-consuming but also prone to errors and inefficiencies.

The limitations of these traditional systems became more evident during the pandemic, where schools struggled to continue academic operations due to the lack of digital infrastructure. Even today, as blended learning becomes the norm, many institutions still revert to manual processes.

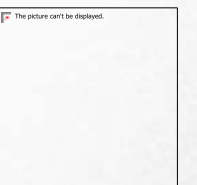

At the same time, advancements in technology such as Artificial Intelligence, Internet of Things (IoT), and online platforms offer opportunities to transform how schools operate.

Studies such as Dungca et al. (2025) demonstrated the use of NLP chatbots in assisting students with academic processes, while Santiago Jr. et al. (2023) utilized sentiment analysis to better understand student experiences in online learning.

However, these systems are often limited in scope and are not integrated into a single platform.

This gap led to the development of Campus Companion, an AI-driven system that unifies enrollment, learning management, attendance, communication, and data analytics into one centralized platform—designed to improve efficiency, accessibility, and decision-making in schools.

Enrollment System

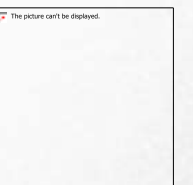

Existing systems improve registration efficiency but lack integration with other modules.

Learning Management System (LMS)

LMS platforms support content delivery and assessment but are often standalone systems.

RFID Attendance System

RFID technology enables fast and automated attendance tracking.

Chatbot (NLP)

Dungca et al. (2025) – AI chatbot assisting academic transactions.

Sentiment Analysis

Santiago Jr. et al. (2023) – Used to analyze student feedback and experiences.

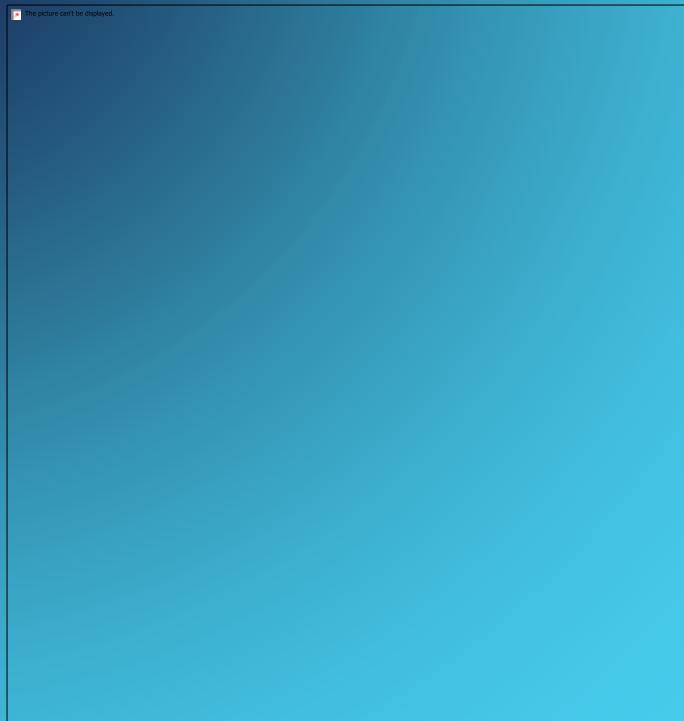

Predictive Analytics

Helps forecast trends such as student population and financial projections.

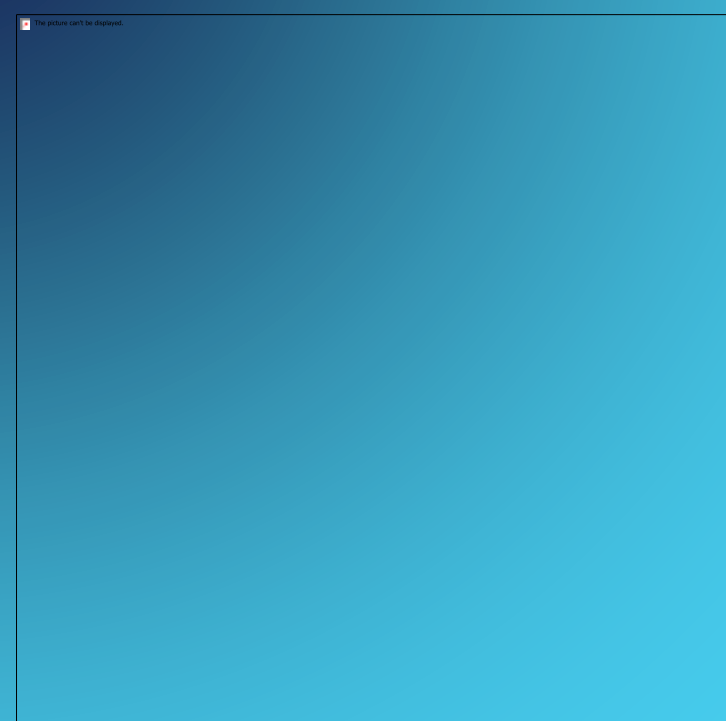

MCAPORTAL

KEY PROBLEMS

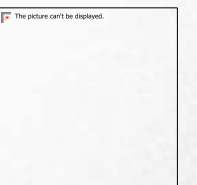

**Manual
enrollment is slow
and error-prone**

**Attendance
tracking is
inefficient**

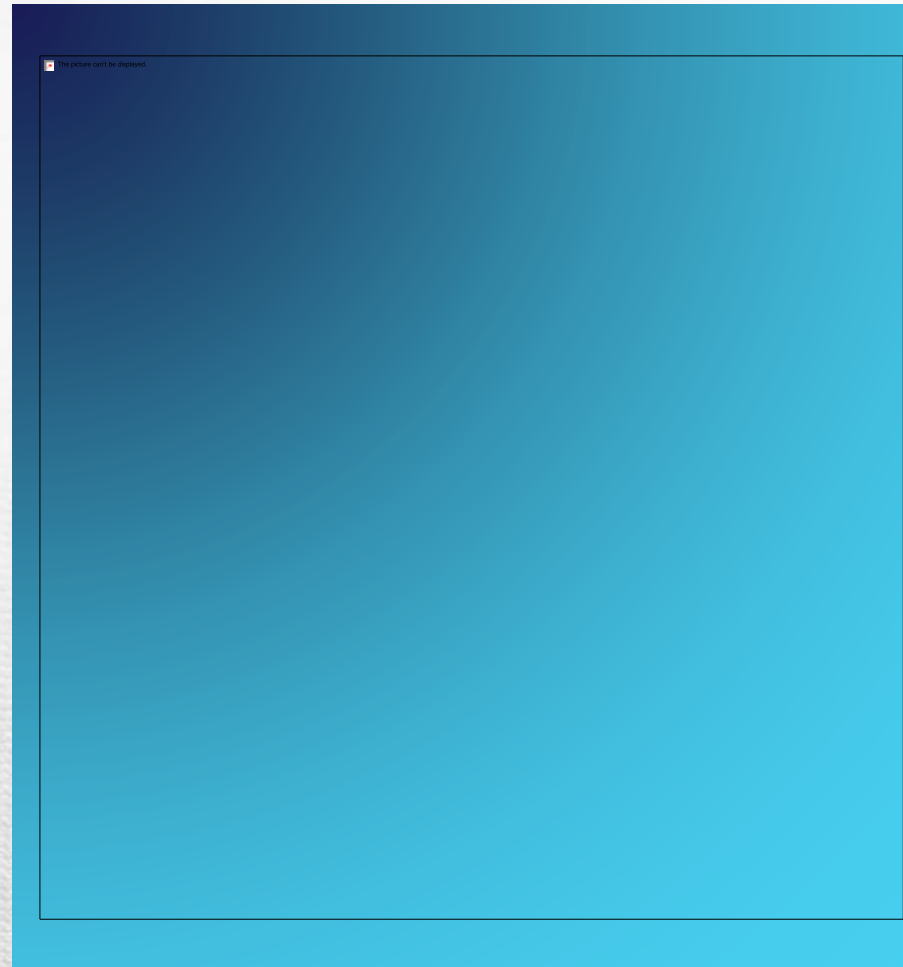

**Feedback collection
is limited and
unstructured**

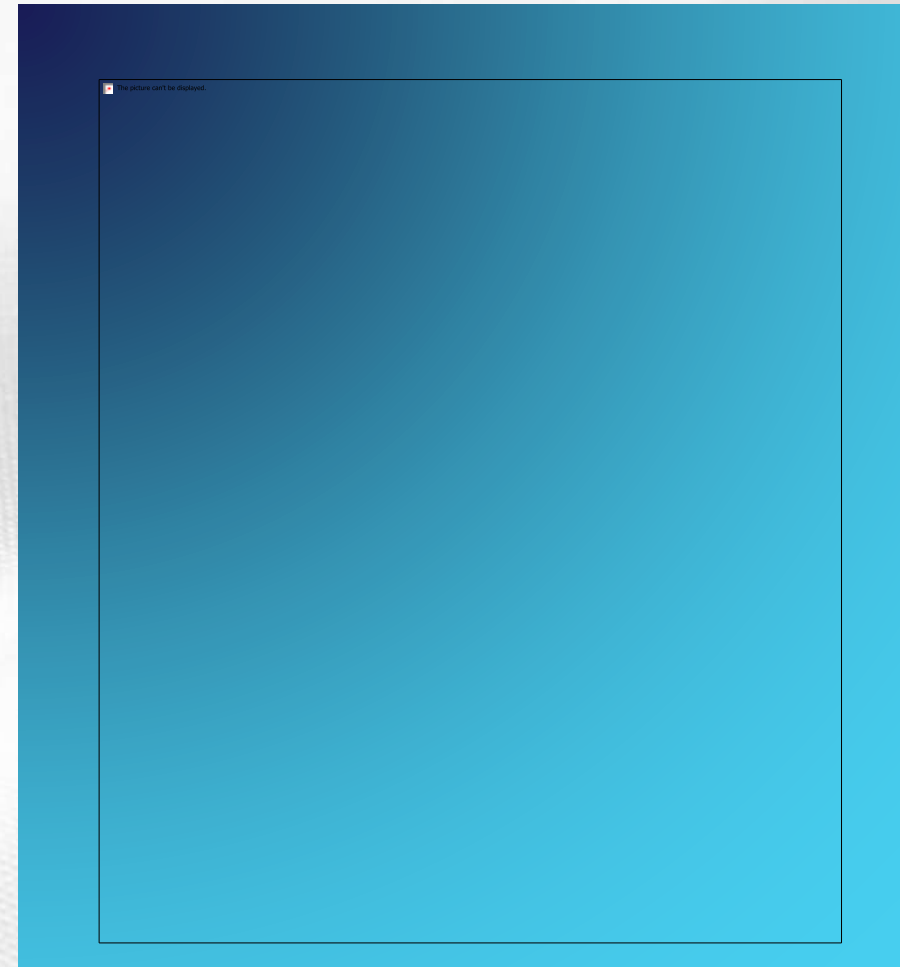

MCAPORTAL

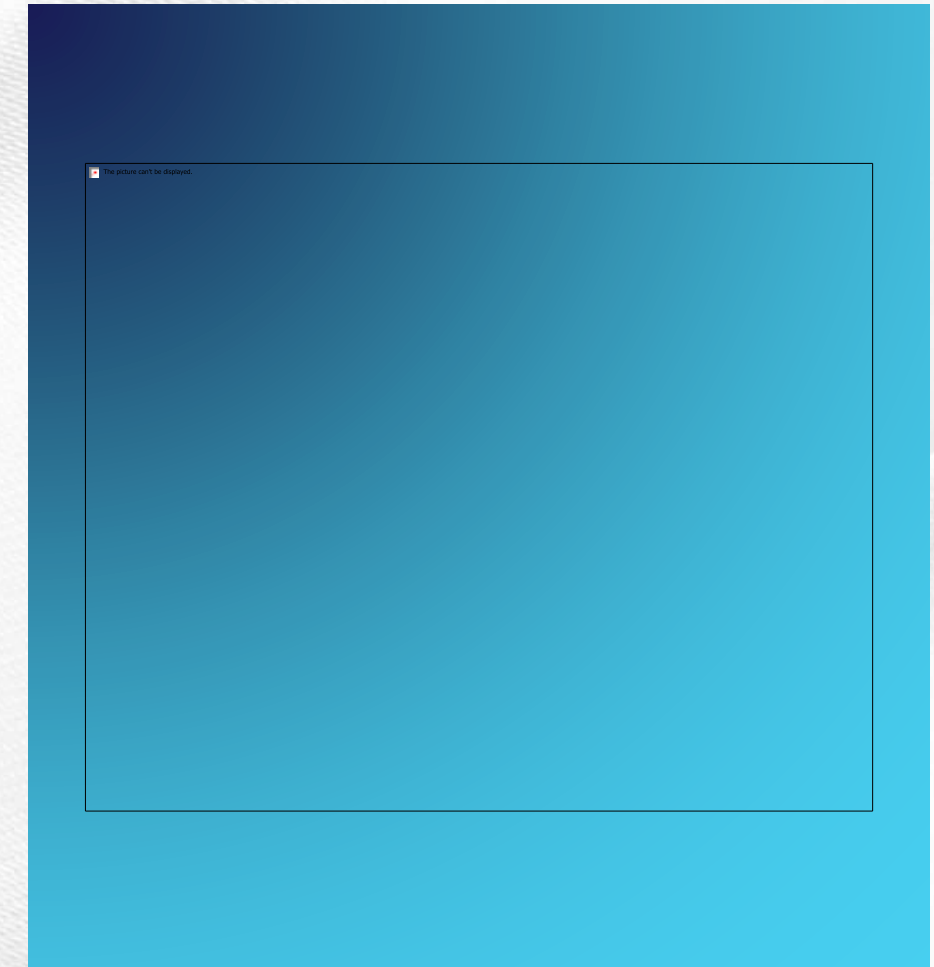

KEY PROBLEMS

**Systems are not
centralized or
integrated**

**Lack of data-driven
decision-making
tools**

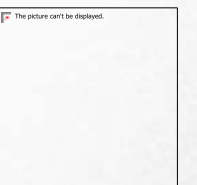

**Difficulty adapting
to modern digital
technologies**

General Objective

To design and develop a Campus Companion, an AI-driven enrollment and learning management system for Maranatha Christian Academy, Calapan City.

MCAPORTAL

OBJECTIVES

Specific Objectives:

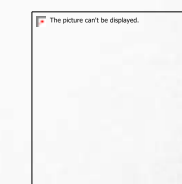

To develop a unified enrollment system with payment integration.

To build a centralized LMS and announcement platform

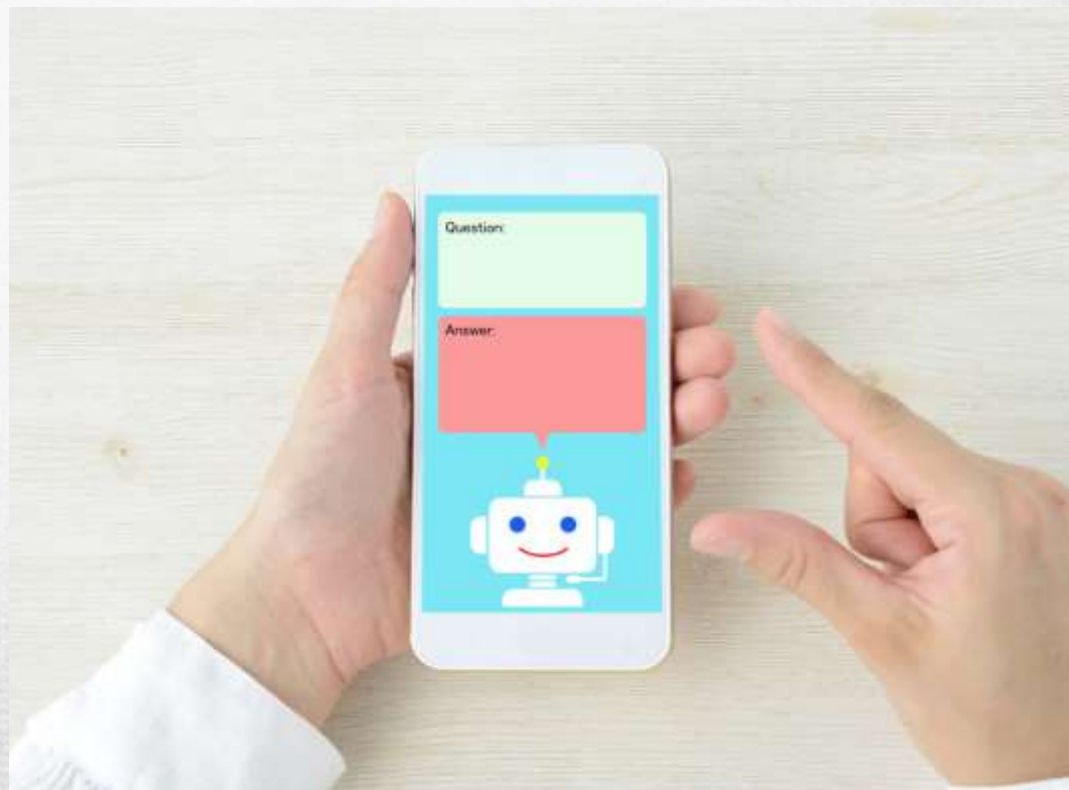

To implement an RFID-based attendance system with SMS notifications

Specific Objectives:

To integrate AI technologies, including:

NLP Chatbot
